## PIERCING AFTERCARE INSTRUCTIONS

Cleaning solutions needed 1+2

### 1. Mild antibacterial unscented soap

### 2. Saline

a) You can use clean convenient spray solution like Steri-wash, H2Ocean, Woundwash etc.

b) You can make your own solution from natural sea salt (non-iodized) and clean water. 1/8 tsp per cup (8oz)

- Always wash hands thoroughly with **antibacterial soap** before handling new piercing.
- **Do not** remove jewelry while piercing is healing.
- Clean piercing daily with a **mild unscented antibacterial soap**, rinse off all soap.

### “saline is what aids in healing piercings”

- Using a swab or gauze, soak or spray **saline** on applicator. Hold new piercing, soaking **saline** into it for 30 seconds.
- Rinse site to remove **saline**.
- Dry with disposable paper towel (cloth towels can snag your new piercing and may contain bacteria).
- **Do not** rotate jewelry.
- **Do not** use any type of make up on or around your new piercing until it completely healed.

It's recommended you use the antibacterial soap 1-2 times daily and the saline soak 3-5 times daily. The first two weeks are absolutely essential. You need to keep your piercing clean always, it's a new part of the rest of your body. Wash and maintain your hygiene regularly.
